

## 2018 MODEL YEAR VEHICLES (PRELIMINARY)

This section contains the preliminary fuel economy values for 2018 model year vehicles. The fuel economy data and fuel costs are updated weekly. Alternative fuel vehicles are highlighted with a columbia blue bar, and those that can use two kinds of fuel, such as flexible fuel vehicles, have an entry for each fuel type. Additional information about alternative fuel vehicles follows the main section of the guide.

Manufacturer Model Configuration (trans, eng size, cyl)	MPG		Annual Fuel Cost	GHG Rating	Notes

### ABBREVIATIONS:

2WD.....Two-Wheel Drive  
 4WD.....Four-Wheel Drive  
 A.....Automatic Transmission  
 A-S.....Automatic Transmission-Select Shift  
 AM.....Automated Manual  
 AM-S.....Automated Manual-Selectable  
 AV.....Continuously Variable Transmission  
 AV-S.....Continuously Variable Transmission with Select Shift  
 AWD.....All-Wheel Drive  
 City.....MPG on City Test Procedure  
 Cyl.....Cylinders  
 Comb.....Combined  
 D.....Ultra-Low Sulfur Diesel

E85.....85% Ethanol/15% Gasoline  
 Eng Size.. Engine Volume in Liters  
 EV.....Electric Vehicle  
 FFV.....Flexible Fuel Vehicle  
 FWD.....Front-Wheel Drive  
 Gas.....Regular Gasoline  
 GHG.....Greenhouse Gas  
 HEV.....Hybrid-Electric Vehicle  
 Hwy.....MPG on Highway Test Procedure  
 i-ELOOP..Mazda Optional Technology Package  
 Li-Ion.....Lithium Ion  
 LWB.....Long Wheel Base  
 M.....Manual Transmission  
 Mid.....Midgrade Gasoline  
 Mode.....Multimode Transmission

MPG.....Miles per Gallon  
 NA.....Not Available  
 Ni-MH.....Nickel-Metal Hydride  
 ORP.....Off-Road Package  
 P.....Premium Gasoline Recommended  
 PHEV.....Plug-in Hybrid Electric Vehicle  
 PR.....Premium Gasoline Required  
 PT4WD....Part-time 4WD  
 PZEV.....Partial Zero-Emission Vehicles  
 S.....Supercharger  
 SIDI.....Spark Ignition Direct Injection  
 SS.....Stop-Start Technology  
 SWB.....Short Wheelbase  
 T.....Turbocharger  
 Tax.....Subject to Gas Guzzler Tax  
 Trans.....Transmission

## DIESEL VEHICLES

Diesel-powered vehicles are typically more fuel efficient than comparable vehicles powered by gasoline. Diesel engines are inherently more energy-efficient, and diesel fuel contains roughly 10%–15% more energy per gallon than gasoline. In addition, new advances in diesel engine technology have improved performance, reduced engine noise and fuel odor, and decreased emissions of harmful air pollutants. Ultra-low sulfur diesel fuels also help reduce emissions from these vehicles.

Annual fuel costs below are estimated assuming 15,000 miles of travel each year (55% city and 45% highway) and a diesel fuel cost of \$2.76 per gallon.

## ELECTRIC VEHICLES

Electric vehicles (EVs), also called "battery electric vehicles," are propelled by one or more electric motors powered by rechargeable battery packs. EVs are energy-efficient and reduce our dependence on petroleum since electricity is produced from domestic resources. They emit no tailpipe pollutants, although the power plant producing the electricity may emit pollution.

Electric motors have several performance benefits. They are quiet, have instant torque for quick acceleration, and require less maintenance than internal combustion engines.

Current EVs have a shorter driving range than gasoline or hybrid vehicles, and their range is more sensitive to driving style, driving conditions, and accessory use. Fully recharging the battery pack

can take several hours—though a "quick charge" to 80% capacity may take as little as 30 minutes—and options for charging the vehicle away from home may be limited. EVs are also more expensive than comparable conventional vehicles and hybrids due to the cost of the large battery packs. Still, manufacturers are working hard to improve the driving range and reduce the cost of these vehicles, and public charging stations are becoming more common.

A federal income tax credit of up to \$7,500 is currently available to consumers purchasing a qualifying EV. Visit [www.fueleconomy.gov](http://www.fueleconomy.gov) for additional information on EVs, including tax incentives.

## PLUG-IN HYBRID ELECTRIC VEHICLES

Plug-in hybrid electric vehicles (PHEVs) are hybrids with high-capacity batteries that can be charged both by regenerative braking and by plugging them into an electrical outlet or charging station. PHEVs can store enough electricity from the power grid to significantly reduce their petroleum consumption under typical driving conditions.

There are two basic PHEV configurations:

- **Series PHEVs, also called Extended Range Electric Vehicles (EREVs).** The electric motor of these vehicles is the only power source that turns the wheels; the gasoline engine only generates electricity. Series PHEVs can run solely on electricity until the battery needs to be recharged. The gasoline engine will then generate the electricity needed to power the electric motor. For short trips, these vehicles may not use any gasoline.
- **Parallel or Blended PHEVs.** Both the engine and electric motor are mechanically connected to the wheels, and both may propel the vehicle. The vehicle may operate using both electricity and gasoline at the same time, using electricity only, or using gasoline only.

PHEVs also have different battery capacities, allowing some to travel farther on electricity than others. PHEV fuel economy, like that of EVs and regular hybrids, can be sensitive to driving style, driving conditions, and accessory use. When operating in pure electric mode, PHEVs emit no tailpipe pollutants, although the power plant producing the electricity may emit pollution.

Charging a PHEV's battery typically takes several hours, but a "quick charge" to 80% capacity may take 30 minutes or less. However, PHEVs don't have to be plugged in to be driven. They can be fueled solely with gasoline, like a conventional hybrid, but they will not achieve maximum range or fuel economy without charging.

PHEVs use less petroleum and cost less to fuel than conventional hybrids, but they are more expensive to purchase.

A federal income tax credit of up to \$7,500 is currently available to consumers purchasing a qualifying PHEV. Visit [www.fueleconomy.gov](http://www.fueleconomy.gov) for additional information on PHEVs, including tax incentives.

‡ This vehicle did not use any gasoline for charge-depleting (electric) operation during EPA city and highway tests. However, depending on how you drive the vehicle, you may use both gasoline and electricity during charge-depleting operation following a full charge

## HYBRID-ELECTRIC VEHICLES

It's no coincidence that some of the most fuel-efficient vehicles for the 2018 model year are hybrid electric vehicles (HEVs). Hybrids combine the best features of the internal combustion engine with an electric motor and can significantly improve fuel economy without sacrificing performance or driving range. HEVs may also be configured to provide increased performance rather than fuel economy.

HEVs are primarily propelled by an internal combustion engine, just like conventional vehicles. However, they also convert energy normally wasted during coasting and braking into electricity, which is stored in a battery until needed by the electric motor. The electric motor assists the engine when accelerating or hill climbing and at low speeds, where internal combustion engines are least efficient. Unlike plug-in hybrids, regular hybrids cannot be plugged into an external source of electricity to be recharged; conventional gasoline and regenerative braking provide all of the energy that the vehicle needs.

Annual fuel cost is estimated assuming 15,000 miles of travel each year (55% city and 45% highway) and a fuel cost of \$2.68 per gallon for regular unleaded gasoline or \$3.19 for premium gasoline.

## ETHANOL FLEXIBLE FUEL VEHICLES

Ethanol flexible fuel vehicles (FFVs) are designed by the original manufacturer to operate on gasoline, E85, or any mixture of the two fuels. Annual fuel cost is estimated assuming 15,000 miles of travel each year (55% city and 45% highway) and an average fuel cost of \$2.11 per gallon for E85, \$2.68 per gallon for regular unleaded gasoline, and \$3.19 per gallon for premium unleaded gasoline. The price of ethanol is highly variable from region to region; it is typically lower in the Midwestern United States and higher in other areas. Therefore, actual consumer experience may differ significantly from the annual fuel cost estimate presented here.

Fuel economy and driving range values are shown for both gasoline and E85. When operating your FFV on mixtures of gasoline and E85, such as when alternating between using these fuels, your driving range and fuel economy values will be somewhere between those listed for the two fuels, depending on the actual percentage of gasoline and E85 in the tank.

Manufacturer Model Configuration (trans, eng size, cyl)	MPG		Annual Fuel Cost	GHG Rating	Fuel	Range (miles)
